# Case Study – BBC Good Food

## Problem

The aggressive growth of voice represented both opportunity and a serious threat to the business model driving BBC Good Food. It is reliant on its ability to serve and sell advertising impressions on their hugely popular recipe website and app. However, without developing a custom experience, voice assistants offer little scope to ensure presence when someone utters “Find me a good recipe for pancakes”. It also does away with traditional impressions when a result is returned.

## Opportunity

Alexa Skills make current mobile or web-specific functions more convenient through voice. The kitchen presents a perfect example where voice excels – facilitating hands-free behaviour where flipping cookbook pages back and forth or tapping on a greasy phone screen is difficult. HiMomSaidDad set out to create the go-to recipe assistant for Alexa - achieving this would mean creating the ultimate experience in voice guided cooking that BBC Good Food could own.

# Case Study – BBC Good Food

## Solution

In order to design a best-in-class experience, the brand had to overcome common cooking pain-points and consider how to facilitate search for 11,000 recipes over voice. Ultimately, the core of the skill is that it enables hands-free cooking and they therefore had to give significant thought to peoples' mind set when it comes to cooking and the use cases they should take into account.

Ask too many questions and the use cases to take into account would create frustrating user experience. Ask too few, and the user would be faced with a barrage of recipes. The solution was to enable a range of commands with filtering criteria.

Once the customer has selected a recipe, they can cook-along without having to flick between instructions and list of ingredients for a seamless walkthrough. Users can simply ask "how much sugar?" and the skill will instantly confirm.

# Go-To-Market

## Approach

BBC Good Food invested significantly in PR around the launch of the skill, which they featured in both consumer and industry press.

A landing page on [bbcgoodfood.com](http://bbcgoodfood.com) dedicated to the skill was created to drive further traffic. BBC Good Food also used their popular social channels to promote the skill.

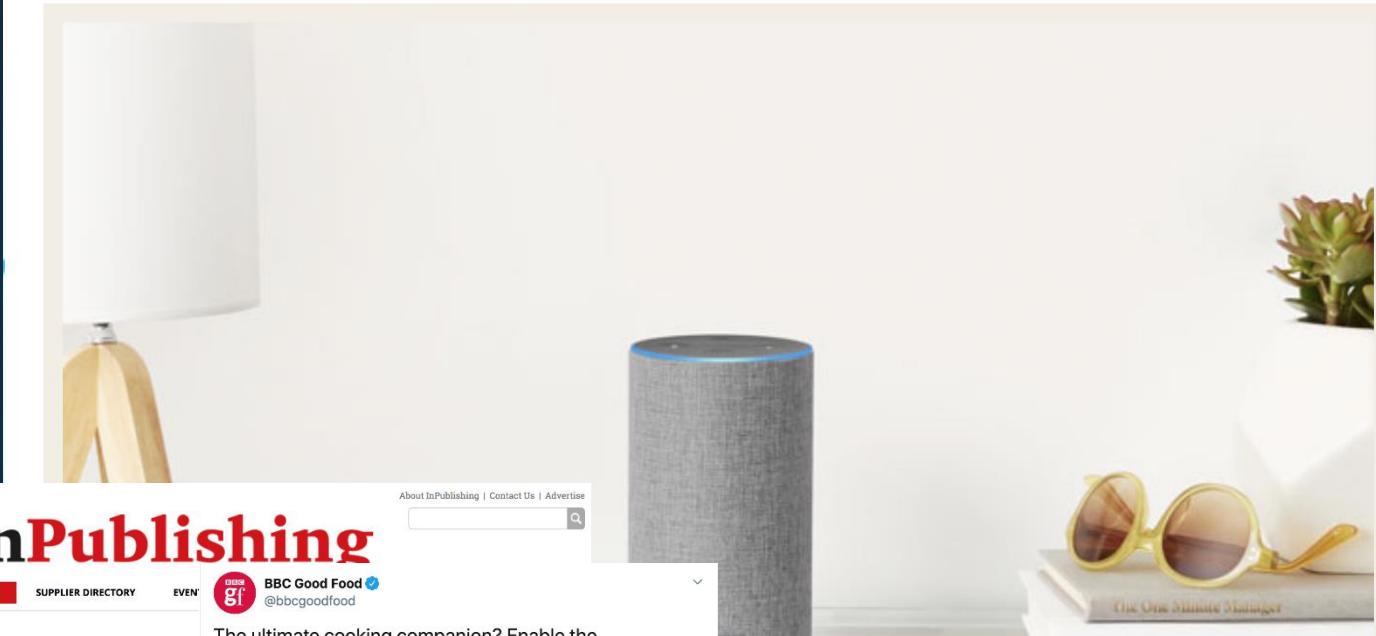

In addition, the Alexa consumer marketing team elected to feature the skill on the Store and within the Staff Picks section, as well as include the skill in the "What's New on Alexa" newsletter which helped increase discovery and awareness among customers.

## How to use the BBC Good Food Alexa skill

By BBC Good Food team

Sick of your phone getting covered in flour while perfecting your Victoria sponge? Tired of your magazine pages sticking together with peanut butter? Let us introduce you to the all-new BBC Good Food Alexa skill...

The ultimate cooking companion? Enable the @AmazonUK BBC Good Food skill on your Alexa dev and your kitchen will never be the same again... [#AskAlexa](http://bbcgoodfood.com/howto/guide/ho...)

# Good Food's Learnings

Content designed for web and mobile is not necessarily suited for voice experiences. To optimise the interaction, restructure content by breaking it into smaller lines, considering pacing and including functionality for enhanced control.

Expect the unexpected. No matter how you think users will talk to your skill, you're bound to have users ask things you weren't expecting. Make a plan to dynamically respond to these failed intents.

For users, the field of reference when talking to Alexa is human conversation. Still a little way away from that, make sure to guide users through paths and responses in order to make the experience flow like a conversation despite any technical limitations.
