Heads Up!

*The Ellen DeGeneres Show*

Powered by VaynerMedia

Skill Launch: November 2017

Case Study: April 2020
Case Study – Heads Up!

Problem

*Heads Up!* is a popular game created by the Ellen Degeneres Show, used primarily as a mobile app. Interested in connecting with customers in a new channel and expanding the *Heads Up!* brand, the producers of the show wanted to bring the game into a voice-first context with an Alexa Skill.

However, the popularity of the mobile app meant fans were used to playing with the phone screen as a focal point in a heavily visual game design.

Opportunity

VaynerMedia worked with the Ellen Digital Team to translate *Heads Up!* into a voice-first experience, reimagining the gameplay to be driven by audio clues.

Fans of the game and show loved the voice-first game, however played through content quickly and wanted more.

That’s when VaynerMedia introduced the In-Skill Purchasing (ISP) functionality, allowing customers to purchase additional premium content from within the Skill.
Case Study – Heads Up!

Solution

VaynerMedia first analyzed the game functionality in the Heads Up! mobile app, identifying what worked well in a voice-first experience and what needed to be redesigned. This included identifying opportunities to use audio cues for in-game user feedback.

VaynerMedia and the Ellen Digital Team coordinated to develop custom content for the skill. And to ensure the content stayed fresh, the team built a custom content management system for easy editing, adding and releasing new game content on an ongoing basis.

As one of the first Skills to leverage ISP (in-skill purchasing) on Alexa, this helped lead the charge in monetization, which in turn incentivizes developers to create better skill experiences and explore more innovative use cases.
Go-To-Market Approach

In addition to making announcements on Heads Up!’s social profiles and Ellen DeGeneres’ owned channels, they coordinated with Ellen’s PR team for a major push to let fans know that their favorite game was now on Alexa.

This continued for subsequent announcements, including additional feature adds the availability of Heads Up! For Echo Auto.

HeadsUp’s Learnings

Customers responded to a variety of content being available. The skill launched with only three “decks” or categories. However, VaynerMedia built a custom CMS that allowed them to continuously introduce new content over time to keep customers interested and anticipating more.

This not only made it possible to introduce new content for purchase, as part of the in-skill purchase program, but also allowed The Ellen Show to introduce seasonally relevant content over the course of the year.

This skill allows users to provide open-ended answers based on clues from Alexa. With answers ranging from proper nouns to popular culture, it was necessary to continuously provide alternative pronunciations and phonetic spellings to ensure that utterances from customers would be understood.

Decks for purchase were a popular element with sales tending to increase around seasons and occasions when families are spending time at home together.
